PROJECTS

Rookies – AI Virtual COO for Small Businesses

An AI-powered platform that helps small and home-based businesses manage their entire operations effortlessly. Rookies brings together order management, payments, customer communication, inventory tracking, and marketing into one simple system, powered by multiple AI agents and real-time automation workflows. It integrates seamlessly with WhatsApp and Instagram using n8n, automatically capturing orders, sending reminders, and organizing daily tasks. Built with a modern SaaS stack (Next.js, Supabase, Prisma) and a clean, human-friendly design, Rookies reduces operational chaos so business owners can focus on their craft and growth.

LeadPilot - AI Sales Outreach Assistant

LeadPilot is an AI-powered sales agent designed to help businesses—especially those without websites—get discovered and connected with freelancers who can support their growth. It automates key early-stage outreach tasks like identifying prospects, crafting personalized messages, and guiding follow-ups, turning scattered lead generation into a more consistent workflow. Built primarily with Python and a web frontend (HTML/CSS/JavaScript), LeadPilot aims to reduce the manual effort of finding and engaging potential customers so teams can focus on closing deals and building relationships.

RupAI –RuralFinancial Literacy Assistant

An AI-powered app that simplifies rural personal finance with modules like budgeting, SIP calculator, purchase analyzer, and gamified quizzes. Includes a finance chatbot and real-time stock insights using Gemini and AlphaVantage APIs, with Firebase Auth & Firestore for secure user data. Built in Java with a modular, offline-friendly, and accessible design.

Project KISAN - Farmer's Assistance mobile app

An AI-powered mobile assistant that helps Indian farmers with voice-based support, crop diagnosis, weather forecasts, expert help, and government schemes. Uses Gemini API, OpenWeatherMap, and Firebase tools to deliver real-time insights and government schemes in regional languages. Built with Flutter and Dart, focused on accessibility and tech empowerment for India's rural farming community.

Bits and Bytes: College canteen mobile App

A smart canteen management application built with Java and XML in Android Studio, the Bits and Bytes app reimagines the campus dining experience for students and staff. The app offers a seamless platform to browse menus, place orders, and make digital payments, reducing waiting times and enhancing convenience. With features like live order tracking, pre-booking, personalized meal recommendations, and AI-driven analytics for food choices, it bridges technology with everyday campus life. Powered by Firebase for real-time updates and secure transactions, the app emphasizes a clean, intuitive interface to make campus dining faster, smarter, and more enjoyable for the entire college community.
